

RESULTADOS DEL SISTEMA DE RECuento

En la madrugada del día 6 de octubre (2.00 AM) el sistema de recuento paralelo del comando del No había procesado el 82% de los votos emitidos en el país. El primer boletín fue presentado a la prensa con 180 mil votos a las 21 horas, luego de una decisión de adelantar la primera entrega (que debía contener al menos 500 mil votos procesados) dada la manipulación de datos por el Ministerio del Interior. La segunda entrega, con 515 mil votos, se realizó cerca de las 22 horas. De allí en adelante, en boletines sucesivos, se fueron agregando millones de votos, con un crecimiento exponencial de la masa de datos procesados. El sistema logró procesar mesa a mesa, en los días siguientes, el 95% de la información electoral del 5 de octubre.

Esta información coincide básicamente con la entregada por el ministerio del interior y es muy similar a la del servicio electoral.

RESULTADOS GENERALES

De acuerdo al escrutinio de 21 066 mesas procesadas por el Comando, el NO obtuvo una diferencia de 12.4% de los votos, acumulando un 56.2% contra un 43.8% para el SI, lo que equivale a una diferencia -provisoria- de 835.906 votos. Cabe recordar que, según la ley de votaciones populares y escrutinios actualmente vigente, los totales de una y otra opción constituyen el universo sobre el cual se establece el resultado. No se contabilizan legalmente los votos nulos y blancos. Estos alcanzaron el 1.31% y el 0.98% de los votos totales emitidos, cifra considerablemente inferior a la de eventos electorales anteriores.

Una estimación preliminar de la abstención la sitúa en un rango del orden de 3%, lo que también constituye un récord histórico. Si a ello se agrega que la inscripción electoral cubrió un 92% del universo potencial de electores (contra un 81% en 1973), no se puede menos que concluir que el 5 de octubre de 1988 constituyó la jornada de mayor participación político-electoral de la historia nacional.

LOS RESULTADOS POR SEXO

El NO ganó en hombres y mujeres y en casi todas las regiones, configurándose una inesperada homogeneidad en el comportamiento electoral nacional.

Mientras la diferencia entre las opciones en juego fue de un 19% entre los hombres, alcanzó un 6% entre las mujeres.
